Apply patient sticker here

Circle any numbers that apply:

### Patient Factors
- 1. BMI equal to or greater than 24
- 1. ICU admission
- 2. Acute immobilization anticipated ≥ 7 days

### Injury/Trauma
- 1. Abdominal trauma (blunt or organ laceration)
- 1. Burn >50% BSA
- 2. Brain injury and/or GCS less than 9
- 2. Spinal cord injury (6 weeks or less from injury)

### Procedures/Equipment
- 2. CVL, PICC, or Broviac in place
- 1. ECMO, IR Cath or CPR - within last 2 wks
- 1. Major surgery - within last 6 wks (3 hours or more in duration)
- 1. Mechanical ventilation
- 1. Orthopedic surgery, major - within last 2 wks (Spinal, Complex lower extremity, Pelvis)

### Medications Received
- 1. Asparaginase - within last 3 wks
- 1. Estrogen therapy (OCP) - within last 3 months
- 1. Factor 7 - with last 3 wks
- 1. Inotropes - currently receiving
- 1. TPN - for more than 2 weeks

### Disease State
- 2. COVID-19 Disease/ MISC COVID 19 related
- 2. Autoimmune disease with acute flare or known antiphospholipid Ab positivity
- 1. Bacteremia and/or Severe sepsis
- 2. Cardiac disease involving dilated cardiomyopathy, atrial fibrillation, single ventricle pathology OR palliative surgical shunts
- 2. Diabetic ketoacidosis
- 1. Infections, serious active (meningitis, mastoiditis, intraabdominal/intrathoracic abscess, bone/joint infections i.e. Osteomyelitis, septic arthritis)
- 2. Inflammatory bowel disease with acute flare (ulcerative colitis)
- 1. Malignancy (Ongoing Therapy)
- 1. Nephrotic syndrome
- 2. Thrombophilic condition*
- 2. VTE, Stroke, or Sinus venous thrombosis (previous)
- 1. VTE, Stroke, or MI in 1st or 2nd degree relative (less than 50 years old)

*Thrombophilic conditions
- Factor 5 Leiden mutation
- Antithrombin 3 deficiency
- Protein C or 5 deficiency
- Hyperhomocystenemia
- Lupus anticoagulant
- Prothrombin gene mutation
- Elevated Lipoprotein (a) or Familial Hyperlipidemias

**Total Score:** add up all circled numbers

### Risk Assessment
